Principal's Message

Pharmacy Student's challenges in virtual learning system during the second & third wave of COVID-19

The education system has reformed to a new era of virtualization. Students once on-campus had to shift their academic learning to their houses. The virtual education in India was probably a panic response to the COVID 19 pandemic, but a good quality education system was observed in northern India. However, the overall attitude and acceptance from the students were not satisfactory. The concerns related to teaching methodology adapted, technology and training have led to these responses and can be overcome by a collective effort from mentors, students and parents. An advanced student monitoring system that can accommodate their performance and skills is recommended. Instead of

adapting different systems for online education, a uniform platform validated by universities and government, shall be implemented in the institution. Similarly, hosting regular motivation sessions, workshops and extra-curricular activities shall keep students focused on their online academic responsibilities. Moreover, faculties should prepare and disseminate class in problem-based learning format rather than simply dictating notes. Each intervention and reform should be regularly re-checked for flaws and reframed accordingly to ensure the quality in academia.
